- Coding
- Designing
- DJing
- Breakdancing
- Backpacking
- Gaming

Profile Summary

Frontend Engineer & Architect with 7+ years of experience building scalable, high-performance, and visually engaging web applications. Skilled in Next.js, TypeScript, Tailwind CSS, React, Redux, and Zustand, with experience in UI/UX and graphic design to craft user-centric, accessible & impactful digital experiences.

Education

2015 - 2018 — **R V College of Engineering, Bengaluru**
(MCA - Master of Computer Applications)

2012 - 2015 — **Gogte College of Commerce, Belagavi**
(BCA - Bachelor of Computer Applications)

2010 - 2012 — **Govindram Seksaria Science College, Belagavi**
(Pre-University Education)

2000 - 2010 — **Gomatesh Vidyapeeth, Belagavi**
(High School Education)

Skills

Frontend — Next.js, TypeScript, Tailwind CSS, React, Redux, Zustand, Jest, React Testing Library, Angular, Material UI, Angular Material, Carbon Design System, Styled Components, Puck, Storybook

Backend — Express.js, Node.js, Laravel, PHP, Redis

Database — MongoDB, MySQL, IBM DB2

Tools — Cursor, Windsurf, Warp, GitHub Copilot, ChatGPT, Git, GitHub, Postman, Wix, Webflow, Figma, Illustrator, Photoshop, Notion

Work Experience

Perficient, Bengaluru

Technical Architect (May 2025 - Present)

Client: Ford Motor Company

- Contributed to Ford's global digital transformation, modernizing their e-commerce ecosystem using Next.js, TypeScript, and Tailwind CSS.
- Designed and optimized core modules — Landing Page, Vehicle Dashboard, and Recalls — enhancing scalability, performance, and accessibility.
- Built server utilities for locale-specific Terms & Conditions, enabling dynamic consent tracking.
- Refactored the Recalls module to reduce load time, streamline data fetching, and ensure WCAG compliance.
- Enhanced layout responsiveness across viewports, maintaining consistent grid and design fidelity.
- Collaborated with product, design, and backend teams to align UX, accessibility, and performance goals.
- Mentored developers on frontend architecture, TypeScript practices, and clean code principles.
- Technologies: **Next.js, TypeScript, Tailwind CSS, Zustand, Redis, Jest, React Testing Library, AEM, Monorepo, Micro-frontends, Nx, Atomic Design, Accessibility, Agile**

DemTech.ai, Bengaluru

Frontend Engineer (February 2024 - January 2025)

- Led the frontend development of BeCause, a citizen-mobilization platform enabling NGOs to manage campaigns, outreach, and user engagement.
- Defined a scalable architecture using Next.js, TypeScript, and Redux, improving maintainability across features.
- Built a reusable design system with Material UI, establishing consistent visual language and faster delivery.
- Designed and implemented a white-label theme system, enabling NGOs to customize branding dynamically.
- Developed an admin dashboard & drag-and-drop visual campaign builder using Puck for intuitive design control.
- Built a server-side Data Grid with search, sort, and pagination for optimized data rendering and filtering.
- Partnered with backend and design teams to streamline workflows and ensure pixel-perfect execution.
- Reduced UI build time by over 40% through component reusability, modular design, and performance tuning.
- Technologies: **Next.js, TypeScript, Redux, Material UI, Puck, Styled Components, GraphQL, Apollo Client, Monorepo, Turborepo, Jest, React Testing Library, Figma**

IBM, Bengaluru

Software Developer (September 2018 - December 2023)

- Worked across multiple enterprise applications including DataBlocks, Challenges, Pools, Sales Tool Mapping, Transaction Adjustments and Seller Incentive Systems.
- Led frontend development for DataBlocks, building reusable Angular components and drag-and-drop workflows aligned with Carbon Design System.
- Led the development of Challenges Module, integrating multilingual support (NLS) and migrating 2 years of legacy data to modern systems.
- Automated Sales Tool Mapping to connect CCX tools (chat, scheduler, and email) with SDR profiles.
- Refactored Seller Incentive Module, cutting load time from 2 – 3 minutes to under 10 seconds through backend and SQL optimization.
- Built backend APIs for Transaction Adjustments to support bulk data validation and updates.
- Contributed to IBM's internal Next.js + Redux + Carbon Design System framework called RDX, improving developer efficiency and frontend consistency.
- Mentored interns and enforced Carbon Design System adoption for UI quality and accessibility.
- Technologies: **Angular, Next.js, JavaScript, Redux, Jest, React Testing Library, Express.js, PHP, Laravel, Spark, Scala, Spring Boot, Carbon Design System, IBM DB2, MongoDB, Sketch, Agile**

IBM, Bengaluru

Software Developer Intern (January 2018 - June 2018)

- Completed internship under IBM CIO, contributing to the Sales Incentives Management System used by global sales teams.
- Developed responsive web modules using AngularJS, PHP, and IBM DB2, improving performance and reliability.
- Collaborated in Agile sprints with senior developers on planning, implementation, and testing.
- Delivered production-ready components that evolved into enterprise-grade modules.
- Technologies: **AngularJS, JavaScript, Carbon Design System, PHP, IBM DB2, Agile**
